

Strategy search and rejection under a zero mean

Nested Gaussian AR(1), $\phi = 0.5$, shock correlation = 0.35 | T = 512, MC = 2000, B = 999, L = 16, HAC lags = 5

95% pointwise Wilson MC intervals; panels have separate vertical ranges

(a) Family maximum tests

(b) Pointwise tests of the selected HAC winner
