

Null rejection and local power under three processes

$K = 20$, $\text{AR } \phi = 0.5$, $\text{GARCH } \phi = 0$ | $T = 512$, $\text{MC} = 2000$, $B = 999$, $L = 16$, $\text{HAC lags} = 5$

95% pointwise Wilson MC intervals; signal in the first strategy only

(a) All strategy means are zero

(b) Resampled-HAC max test: one positive mean
